

AKASHDEEP SHARMA

Business Technology Solutions | Full Stack Developer | Agentic AI & Chatbots | RAG & Vector Embeddings
+91 9050022397 | abhi84205@gmail.com | Chandigarh, India | LinkedIn

SUMMARY

Computer Science graduate and Software Engineer with hands-on experience collaborating with enterprise client teams to understand business problems and translate them into technical designs and working technology solutions. Currently at SearchUnify (a Grazitti Interactive company), designing and deploying agentic AI chatbots for enterprise clients using Python, React.js, Node.js, RAG, and vector embeddings, including LLM cost-optimization via model switching and prompt caching. Comfortable across the full stack with Node.js, Python, MongoDB, SQL, React.js, and Angular, with working knowledge of Docker, DevOps, and MLOps. Targeting business technology / full-stack roles with a focus on agentic AI and conversational AI systems.

EXPERIENCE

Software Engineer — SearchUnify (a Grazitti Interactive company)

Nov 2025 - Present | Chandigarh

- Collaborate with internal and client teams to understand business problems and shape them into high-quality, technically sound chatbot solutions using Python, Node.js, React.js, RAG, and vector embeddings.
- Designed and deployed agentic AI chatbots for multiple enterprise clients, translating client requirements into technical designs and implementing dynamic LLM reasoning, multimodality, and CRM-integrated case management.
- Reduced LLM operational costs across chatbot products through model switching and prompt caching.

Software Engineer Intern — Grazitti Interactive

Sept 2025 - Mar 2026 | Chandigarh

- Contributed as a full-stack developer, working with Python, React.js, Node.js, and related web technologies.

PROJECTS

LLM Cost Optimization (Agentic AI Chatbots)

- Analyzed rising LLM API costs as a business problem across enterprise chatbot deployments and translated it into a technical solution design.
- Implemented dynamic model switching (routing simple queries to cheaper models, complex ones to larger models) and prompt caching to cut redundant token usage — reducing overall LLM cost without hurting response quality.

SUSE Chatbot (Agentic AI)

- Collaborated with client teams to shape business requirements into a technical design; built the frontend in React.js and backend in TypeScript/Python.
- Implemented dynamic 'thinking' LLM reasoning for multi-step queries and product-version mapping so responses stay accurate to the user's SUSE product version.
- Built the admin dashboard from scratch with usage analytics graphs and live session tracking.

Enterprise Chatbots — Cornerstone (CSOD), Wellsky & Hunter Industries (Agentic AI)

- Worked directly with client teams across three enterprise clients to translate business requirements into technical designs; built frontends in React.js and backends in TypeScript/Python.
- Implemented multimodality and a search-chat feature (CSOD) enabling users to search their own chat history.
- Built Salesforce case-creation and case-fetch features (Wellsky & Hunter) so the chatbot auto-populates and retrieves case details during conversations.
- Designed structured admin dashboards with usage analytics graphs and live session tracking, applied consistently across all three clients.

PERSONAL PROJECTS

PDF Q&A Chatbot — RAG Assistant

Live: pdf-app-chatbot-dtdealmjfkwd43wmbwn7c.streamlit.app

- Built and deployed a production-ready RAG web app: upload any PDF, ask natural-language questions, get answers grounded in the document with verifiable page citations.
- Designed a 6-step RAG pipeline (load, split, embed, store, retrieve, generate) using LangChain, local HuggingFace embeddings, FAISS vector search, and Groq's Llama models for fast, zero-cost inference.
- Added smart caching (MD5-hashed uploads) to avoid re-embedding the same PDF, deployed live on Streamlit Community Cloud.

School ERP & LMS with AI Assistant

Live: school-er-pgurukul.vercel.app/login

- Designed and built an end-to-end School ERP & LMS covering student records, attendance, report cards, and PTM scheduling, with role-based admin login.
- Integrated an AI chatbot assistant for parents that answers natural-language queries about a child's marks, attendance, and pass/fail status, and shares PTM schedule details.
- Built and deployed the full system independently, hosted live on Vercel.

SKILLS

Full Stack Development: Node.js, Python, React.js, Angular, MongoDB, SQL, JavaScript

Agentic AI & Chatbots: Agentic AI, RAG, Vector Embeddings, LLMs, Prompt Engineering, Prompt Caching, LLM Cost Optimization, Multimodal AI, Dynamic LLM Reasoning

DevOps & MLOps: Docker, DevOps (working knowledge), MLOps (working knowledge)

Data Analysis & Reporting: Data Cleaning & Validation, KPI Reporting, ETL Concepts, SQL Queries, Data Modeling

Soft Skills: Analytical Thinking, Communication, Team Collaboration, Problem Solving, Stakeholder Communication, Adaptability

EDUCATION

B.Tech - Computer Science

Chandigarh Group of Colleges, Landran | 2021 - 2025 | Percentage: 79.4 / 100

CERTIFICATIONS

- Data Analyst with Gen AI Certification — Adda247 (SQL, Power BI, Tableau, Excel) — 2025
- AWS Certified Cloud Practitioner: Cloud Mastery — Udemy / YouAccel Training
- React Programming — Solitaire Infosys — 2023

KEY ACHIEVEMENTS

- Received Star Performer of the Month award at SearchUnify.
- Received Best Coordinator Award and won a Group Discussion (GD) competition; coordinated IEEE Club events for 3 years, managing 100+ attendees per event.

LANGUAGES & INTERESTS

Languages: English, Hindi, Punjabi

Interests: Travelling, Coordination, Public Speaking, Gym
